

**IN THE SPECIFICATION**

Please amend the section starting on page 17, line 19, as follows:

Suitably  $R^3$  is a group  $XR^{16}$ . Preferably in this case,  $X^1$  is oxygen and  $R^{16}$  is selected from a group of formula (1), (3), (6) or (10) above and preferably selected from groups (1) or (10) above. Particular groups  $R^{16}$  are those in group (1) above, especially alkyl such as methyl or halo substituted alkyl, or those in group (10) above. In one preferred embodiment, at least one of  $R^2$  or  $R^3$  is a group  $OC_{1-5}alkylR^{42}$  and  $R^{42}$  is a heterocyclic ring such as an N-linked morpholine ring, so that  $OC_{1-5}alkylR^{42}$  may be a group such as 3-morpholinopropoxy.
